Cyber Intelligence House and Cyberwatch Finland Sign Agreement Intended to Aid in AI-based DARKSOC™ Service

January 24, 2022, Helsinki/Singapore – Cyberwatch Finland, the leading strategic cyber security analysis company, announced today that it has chosen Cyber Intelligence House as their Cyber Exposure Platform for the new real-time situational awareness service DARKSOC™.

A traditional SOC (Security Operations Center) is a facility where a coordinated group of InfoSec professionals monitors and defends all enterprise information systems against cyber threats. A SOC identifies potential threats and mitigates them before a serious incident happens. SOCs are an essential part of the cybersecurity of any cyber-aware organization.

The AI-based DARKSOC™ is rooted in the latest scientific research. It primarily identifies external cyber threats in the Dark Web and Deep Web but covers the whole ecosystem of the organization. DARKSOC™ offers a holistic strategic view of the whole cyber threat spectrum and helps mitigate the various threats more effectively than traditional SOCs.

Cyberwatch's CEO, Aapo Cederberg, states:

“DARKSOC™ combines the strengths of AI, sensor technology, and human insight to provide the most comprehensive view of the threat landscape. Cyber Intelligence House provides us with the industry's leading Cyber Exposure Platform. We have found it to offer superior breadth and depth of data from the Dark Web, Deep Web, and cyberspace forums and marketplaces. The speed and accuracy of the solution are also unrivaled in our experience”.

Cyber Intelligence House's CEO, Mikko Niemelä, adds:

“We are very excited to be partnering with Cyberwatch Finland. Their Cyber Security expertise and services are unique in offering organizations' Executive and Board level guidance on reducing their corporate risk exposure caused by cyber threats. This partnership is perfectly aligned with Cyber Intelligence House's strategy of offering world-class cyber defense through partnerships with leading MSSPs.”

About Cyberwatch Finland:

Cyberwatch Finland provides unique cyber strategic intelligence capabilities and strategic-level international expertise and understanding of the cyber world. Cyberwatch leverages its capabilities with proprietary technology developed in cooperation with leading academic organizations using state-of-the-art artificial intelligence-based analysis methods.

Cyberwatch Finland experts interpret and present complex cyber world phenomena and developments into an easy-to-understand format, utilizing the latest technology, easily adaptable methods, and various media formats.

Cyberwatch Finland increases the resilience of any organization and helps prevent costly cyber disasters.
